Experience

FoodServiceWarehouse.com / Software Developer

JANUARY 2013 - PRESENT, ENGLEWOOD, CO

I'm currently responsible for primary development of the e-commerce website and supporting infrastructure. The website was recently completely re-written and is self-hosted with ASP.NET 5 and uses Angular and Bootstrap client side. A cluster of Nginx servers is used for load balancing and has also been used for server side split testing. It utilizes Cloudinary for image manipulation and content delivery and Incapsula for DDOS mitigation. Supporting tools such as product and category management are Angular apps connected to Node/Hapi APIs.

I serve as a technical lead regarding Angular and more generally client side development. As a member of the dedicated front end team I work closely with UI/UX design and SEO. I'm familiar with CSS frameworks such as Bootstrap and Foundation and preprocessors including SASS and Less. I also have experience with build and deployment automation using Jenkins and Ansible.

Previous responsibilities included maintenance and feature implementation of past iterations of fsw.com and related internal tools using ASP.NET MVC, Entity Framework, Razor, jQuery, and Angular.js.

PRIDE Marketing & Procurement / Systems Administrator

JULY 2012 - JANUARY 2013, ENGLEWOOD, CO

I maintained a VMWare infrastructure used to host client e-commerce websites and mail services for the Pride buying group. I was responsible for maintaining, DNS servers, Zimbra and Exchange mail servers, deploying client sites to IIS and also provided second tier support for clients.

Coface Collections NA / Systems Administrator

MAY 2009 - JULY 2012, METAIRIE, LA

I was responsible for managing 250+ member Windows domain including systems support for custom business software. I focused primarily on process automation and created several internal websites for managing users and domain permissions that integrated with Active Directory.
